

GREEN INNOVATIONS

As Pittsburgh moves away from its industrial past, it must shift its focus toward innovation. The US Steel Tower represents the strength and durability of past prosperity. Its roof, the largest of its kind, provides an opportunity for that innovation. With space for public leisure, meetings, and formal catered services, Green Innovations adds valuable community space at the heart of the city. Under a canopy solar voltaic panels, the space will afford views of Pittsburgh's historic point. Organic walls will manage rainwater, it will be one of the greenest attractions in downtown. Green Innovations sets the precedent for rooftops across Pittsburgh, and the world, and will catapult the city into its new future.
